1. Which HTML tag must surround your form elements?

1 / 1 point

- ☐ <fieldset>
- ☒ <form>
- ☐ <formcontrols>
- ☐ <input>

✓ **Correct**

The form tag must wrap around all of your form controls.

2. Which of these are required or very common attributes of <input>? (Select all that apply.)

1 / 1 point

☒ type

✓ **Correct**

Type and name are required and id is almost always used.

☒ id

✓ **Correct**

Type and name are required and id is almost always used.

☒ name

✓ **Correct**

Type and name are required and id is almost always used.

☐ text

3. Which attribute of the <input> tag does the value of the for attribute of <label> need to match?

1 / 1 point

- ☐ type
- ☒ id
- ☐ value
- ☐ name

✓ **Correct**

Matching the for attribute of <label> to the id attribute of <input> connects the label to the field.

4. Which of these types of controls use the <input> tag? (Select all that apply.)

1 / 1 point

- ☐ Select list
- ☒ Submit buttons

✓ **Correct**

The type attribute separates these elements.

☐ Text area

☒ Radio buttons

✓ **Correct**

The type attribute separates these elements.

The type attribute separates these elements.

☒ Text

✓ **Correct**

The type attribute separates these elements.

5. Which attribute triggers the browser's built-in validation?

1 / 1 point

- ☐ validation
- ☒ required
- ☐ validate
- ☐ checkvalue

✓ **Correct**

Note that older browsers may not support this.

6. What causes JavaScript to prevent the form from submitting?

0 / 1 point

- ☒ If controls are left blank, the form will not submit
- ☐ Setting the validation property to false
- ☐ Having the validation function return false
- ☐ Regular expressions

✗ **Incorrect**

Please revisit the lesson **Processing the Form**.

7. What symbol signifies that an object is being passed to a function?

1 / 1 point

- ☐ Square brackets
- ☐ Quotation Marks
- ☐ Parentheses
- ☒ Curly braces

✓ **Correct**

Details about using objects is covered in a later lesson.

8. What can you use to add custom patterns such as phone numbers?

1 / 1 point

- ☒ Regular expressions
- ☐ A callback function
- ☐ The validator plugin
- ☐ A custom function

✓ **Correct**

RegExp is a powerful toolset for pattern matching and is not limited to JavaScript.
